

Manjeshwar Aniruddh Mallya

Limerick, Ireland, V94 DP7N | +353 870309880 | [Email](#) | [LinkedIn Profile](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Results-driven Software Engineer and master's candidate with ~2 years of experience developing scalable software solutions and resolving complex technical challenges. Proficient in Python, C# and Java, with strong foundation in object-oriented programming, data structures, algorithms, and agile methodologies. Passionate about bridging technical depth with real-world impact whether that's coding solutions, deploying models, or working directly with clients to solve meaningful problems. Seeking opportunities where technical problem-solving meets customer value.

EDUCATION

Master of Science – MSc, Software Engineering w/ Data Analytics

University of Limerick, Ireland | Expected Graduation: 2025

Bachelor of Technology – BTech, Electronics and Communications Engineering

Manipal Institute of Technology, India | 2022

- Minor in Principles of Computing using Python
- Awarded 50% tuition scholarship for maintaining a CGPA above 8.5
- IBM Data Science Professional Certificate (via Coursera): Gained foundational skills in Python data visualization, ML fundamentals, and practical applications.

12th Grade (95.16%) | Expert PU Science College, India | 2018

10th Grade (CGPA 10.00/10.00) | Canara High School, CBSE, India | 2016

TECHNICAL SKILLS

Languages: Python (Proficient), C#/.NET, SQL, , Java

Frontend: React, HTML, CSS, JavaScript

API Integration: Azure DevOps APIs, REST APIs, Third-party service integration

Data & Analytics: Machine Learning (Supervised & Unsupervised), Data Cleaning & Validation

Soft Skills: Problem-Solving, Technical Communication, Adaptability, Ownership, Bias for Action

PROFESSIONAL EXPERIENCE

Software Engineer

Siemens Healthineers | Bangalore, India (July 2022 – March 2024)

- Collaborated with cross-functional teams to develop 6+ user stories per sprint using C# and WPF for medical application features
- Resolved complex technical challenges by troubleshooting 20+ high-priority software issues using advanced debugging techniques, ensuring timely resolution for internal customers
- Optimized system performance by integrating Python modules for UI components, achieving 20% performance improvement through technical innovation
- Maintained comprehensive documentation for 30+ Data Warehouse logs, implementing fixes to enhance software stability and user experience
- Conducted exploratory analysis on coronary aneurysm data and contributed research toward internal knowledge initiatives.

Graduate Trainee Engineer (Intern)

Siemens Healthineers | Bangalore, India (January 2022 – June 2022)

- Built automated solutions using C# Command Line Interface tool for document generation, reducing manual effort by ~30 hours/month for internal teams
- Integrated multiple APIs (Azure DevOps, Signature Server) via dependency injection, streamlining cross-team workflows and improving productivity
- Implemented robust technical solutions using asynchronous programming to improve tool responsiveness and reliability in distributed environments

Data Analytics Intern

The Sparks Foundation | Remote (Singapore) (August 2020 – September 2020)

- Performed data collection, cleaning, and validation for city/business datasets using Python (BeautifulSoup, Geopy).
- Employed K-Means clustering location-based data from Foursquare APIs, boosting business profits by 10% through strategic insights.
- Demonstrated strong algorithmic thinking in large-scale data handling and analytics.

Project Highlights

LLM-Based Requirements Capture Assistant *(MSc Thesis, Ongoing)*

- Designing an AI-powered tool that uses prompt engineering with LLMs such as GPT-4, Claude, Llama to convert user input into structured software requirements.
- Designed with Agile team integration in mind (Jira, Confluence), focusing on improving developer experience and reducing specification ambiguity.
- Built React frontend with REST API integration using modern JavaScript frameworks.

Amazon Reviews – Big Data Pipeline (Databricks)

- Built PySpark pipelines to transform, clean, and analyse 6GB+ dataset; achieved 40% faster ETL using efficient transformations.

Research Management System (REST API + Hexagonal Architecture)

- Developed scalable backend system using Java and SOLID principles to manage research artifacts for university use case.

Achievements & Leadership

Hackathon: Prototyped real-time health monitoring system (IICDC by Texas Instruments)

Scholarship: 50% tuition scholarship at Manipal for academic excellence

Agile Contributor: Active in sprint planning, retrospectives, and cross-team code reviews

Additional Information

Work Authorization: Eligible to work in Ireland; expected graduation in 2025.

Availability: Full-time from Sep 2025 | Open to part-time/contract roles during MSc

Interests: Data Visualization, Cloud Computing, AI for Business Transformation.
